Amazon Sales Performance Analysis
Excel Case Study Documentation
1. Introduction
E-commerce sellers rely on data-driven decision-making to optimize sales, manage inventory, and improve customer engagement. This case study focuses on analyzing Amazon sales data using Microsoft Excel. The objective is to extract insights related to product performance, revenue trends, customer behavior, and operational efficiency.
The entire project is executed using Excel, covering data loading, cleaning, preprocessing, analysis through PivotTables, and dashboard creation.
Methodology
5.1 Data Loading
5.2 Data Cleaning
5.3 Data Preprocessing
5.4 Data Analysis Using...
5.5 Dashboard Develop

2. Business Problem Statement
An Amazon seller has shared one month of transactional sales data. The seller wants a structured analysis to answer key business questions such as:
A seller has shared one month of order-level data and wants answers to:
Which products generate the highest total sales?
Which categories perform best?
Which cities (customer locations) show strong or weak performance?
How do payment methods influence orders?
What percentage of orders are delivered, cancelled, or pending?

3. Project Objectives
The analysis aims to:
1. Load and understand the dataset structure.
2. Clean and preprocess the data to ensure accuracy.
3. Create calculated fields for deeper understanding.
4. Perform descriptive and comparative analysis using PivotTables.
5. Develop an interactive dashboard highlighting all major KPIs.
6. Present insights and recommendations based on the findings.
4. Dataset Description
Dataset:- Amazon Dataset

Dataset:- Amazon Dataset
The dataset consists of Amazon order-level sales data with columns such as:
Column Name
Description
Order ID
Unique ID for each order
Date
Order date
Product
Name of the product
Category
Product category (Electronics, Footwear, etc.)
Price
Price per unit
Quantity
Quantity ordered
